

Lesson 1

Worksheet 2

1. How does changing the numbers that are in the program affect what it does? For example, if you change the line `self.say_for_seconds("Hello there!", 2.0)` so that it reads `self.say_for_seconds("Hello there!", 1)`, what difference does it make?
2. How can you change the words that the Snake says when you click on it?
3. What happens if we change the order of the two `self.say_for_seconds` lines?
4. What would happen if you wrote "Self" (with a capital "S") instead of "self" (with a small "s")? Does it matter to Python? Why do you think this is?
