

Lesson 1

Worksheet 3 - Tasks

1. *Change the Python code so that the project will say the day of the week and then greet you both by name.* Paste the code from your first program below:

2. *Another command you can use in Pytch is: `self.set_size(0.5)`. Try it out by adding it to your project, use it change the appearance as the project runs. Paste the code from your second program below:*

Extensions

1. *Can you change the snake so that it looks like something totally different? (You will need to make **two** changes: one in the part of Pytch (below the code) that contains the pictures that are available to the program, and one in the Python code (where the picture of the snake is mentioned). Paste the new code from your program below:*
